## ShareRing

ShareRing have developed the world's most secure and flexible identity verification system for the travel industry, sharing/rental and e-commerce economies. Our blockchain-based ShareRing ID technology is the foundation for our B2B2C ecosystem, which is aimed at making travel safer and easier, as well as removing many time-consuming barriers within the e-commerce, sharing economy and rental industries.

ShareRing ID, a lockbox, enables users to access products and services through the ShareRing Ecosystem including shopping, travel services, visa on arrival, or rental services.

ShareRing ID can be used to sign-up for services that require your identity or other personal information you choose to store in your ShareRing ID (i.e. COVID-19 test results). It can also be used to login to websites without the use of a password.

The ShareRing ID lockbox can store documents that are verified by ShareRing (Passport, Drivers Licence), or documents verified by 3rd party providers (University Degrees, Covid Tests). There's no limit to the types of documents that could be stored within a user's ShareRing ID.
