### Pellar Technology

Since 2017, Pellar has been providing end-to-end blockchain solutions to financial institutions, corporations and governments globally. We have developed our own blockchain, implementing a hybrid of PoW and pBFT consensus. Our blockchain is able to process over 20,000 transactions per second. On a daily basis, we process over 10 million transactions network-wide. Using our blockchain, we have built finance, supply chain and identity solutions. We provide these capabilities as a managed service where we take care of scalability, security and performance. We believe all significant transactions will be stored on blockchain, let us empower you in the global evolution of data.
